[где и как купить в Минске?](#)

**Продукция siba  
Предохранитель siba**

Компания **SIBA** — немецкий производитель предохранителей и систем защиты электрических цепей, основанный в 1920 году. SIBA известна своей инновационной продукцией, которая применяется в различных отраслях, включая энергетику, промышленность, возобновляемую энергетику и транспорт.

---

**Основные продукты и серии предохранителей SIBA:**

## **Ассортимент предохранителей SIBA**

Компания выпускает несколько групп типовых предохранителей, включая специальные разработки — для особых случаев:

1. D — общего назначения, для бытовой техники и простейших промышленных устройств.
2. G — малогабаритные малой, средней и большой мощности различной скорости срабатывания: сверх- и быстродействующие, с задержкой.
3. NH — быстродействующие для полупроводниковых приборов, низковольтные, с различными типами крепления. Имеется версия с индикацией срабатывания.
4. UR — сверхбыстрые, защищают силовую электронику транспортных средств, мощных электроприводов.
5. HH — обеспечивают надежную работу силовых энергоснабжающих систем.
6. BB — специального назначения, применяются в подземном оборудовании горнодобывающей промышленности.
7. M — для силовых установок судов.

8. V — для особых условий, например, цепи постоянного тока транспортной автоспецтехники и железнодорожных локомотивов, повышенные вибраций или разработанные по особым техническим заданиям заказчика.

Все виды предохранителей выпускаются по европейским стандартам, включая английские и французские, отдельные группы — по стандартам Северо-Американских стран.

## Основные технические параметры

Конструктивно и технологически предохранители SIBA делятся на:

- стеклянные и керамические;
- цилиндрические и ножевые;
- миниатюрные и обычных размеров;
- поверхностного монтажа, выводные, резьбовые, с держателями;
- плавкие и самовосстанавливающиеся.

Номинальные токи от 35 мА до 1 кА.

Значения тока отключения — до 300 кА

Компания «Олниса» предлагает купить предохранители SIBA любого типа по цене производителя с сохранением гарантии. Наши консультанты помогут выбрать приборы для ваших нужд

1. \*\*Серия NH-Sicherungen (NH Fuses)
  - NH00, NH0, NH1, NH2, NH3, NH4
    - **Применение:** Защита распределительных сетей и силовых цепей.
    - **Особенности:** Высокая отключающая способность, стандартные размеры.
2. \*\*Серия D-Sicherungen (D Fuses)
  - D01, D02, D03
    - **Применение:** Защита цепей управления и трансформаторов.
    - **Особенности:** Компактность, высокая надежность.
3. \*\*Серия gG/gL (General Purpose Fuses)
  - gG, gL
    - **Применение:** Защита цепей общего назначения.
4. \*\*Серия aM/gR (Motor Protection Fuses)
  - aM, gR
    - **Применение:** Защита двигателей и полупроводниковых устройств.
5. \*\*Серия PV Fuses (Solar Fuses)
  - PV
    - **Применение:** Защита фотоэлектрических систем (солнечных установок).
6. \*\*Серия HV Fuses (High Voltage Fuses)
  - HV
    - **Применение:** Защита высоковольтных сетей.
7. \*\*Серия Semiconductor Fuses

- **gS, gR**
  - **Применение:** Защита полупроводниковых устройств.
- 8. \*\***Серия BS 88 Fuses**
  - **BS 88**
    - **Применение:** Защита цепей общего назначения (соответствие стандарту BS 88).
- 9. \*\***Серия LIM (Local Indicating Molded Fuses)**
  - **LIM**
    - **Применение:** Защита цепей с функцией индикации срабатывания.

# Low Voltage Fuses

European NH Knife Blade Fuse System

**SIBA** LV fuse links features a top indicator or a dual indicator for visual blown fuse indication and are available in a variety of voltage ratings, body sizes and operating classes.

**Voltage Ratings;** 400V<sub>AC</sub>, 500V<sub>AC</sub> - 220V<sub>DC</sub>/440V<sub>DC</sub>  
690V<sub>AC</sub>, 1000V<sub>AC</sub>, 1500V<sub>AC</sub>

**Classes;** gG - Full range, general purpose

gB - Full range, mining

aM - Partial range, motor

gTr -Full range, transformer

gTF-Full range, general purpose

000, 00, 0, 1, 2, 3, 4, and 4a

**Sizes;** Standards; IEC 60269-1 & 2, EN 60269-1 & 2  
VDEN0636 PART 1 & 2  
VDE 0636 part 2011  
DIN 43620

## Features and Benefits

- ▶ High interrupt current rating to 120KA
- ▶ Low power loss and low temperature rise
- ▶ All fuse links contacts are corrosion resistant
- ▶ Gripping lugs: metal/live for standard application, metal/insulated for improved safety

## Low Voltage Fuses

### European NH Knife Blade Fuse System

#### General

User's demand for maximum service reliability in low voltage networks coupled with effective and economic operation places considerable requirements on the quality of protective gear used in the electrical networks. SIBA's continuous advances in development and quality of their LV fuse links are preferred for use in feeder line protection. When SIBA LV fuse links are suitably selected to match the line characteristics, they provide the maximum protection against all faults that are generally encountered. The fuse current rating range is capable of protecting small over currents up to its rated breaking current.

#### Design

SIBA fuse links are built to the highest standards, this is met by utilizing the highest quality materials, the most highly automated construction techniques and a work force that has an ongoing training program for maintaining and improving the quality of its products. The fuse link is constructed utilizing a high quality ceramic for the main body with the fuse elements directly spot welded to the contacts of the knife blades. For most fuse links, a dual indicating system is incorporated, the standard flap type that is on the faceplate and the other that is on the top and center of the ceramic body for a more direct viewing.

#### Technical Data and Explanations

##### Current Limiting

The thermal and dynamical capacity of electrical switchgear components are determined by the peak value of the prospective short circuit current  $I_s$ . The magnitude of this peak short circuit current  $I_s$  a value that is dependent on the rms value of prospective short circuit current  $I_p$  and the phase angle of fault occurrence that induces a DC offset. Due to current limiting, high short circuit fault currents do not rise up to their peak capability, when SIBA LV fuse links of the corresponding rated current are utilized

The current limiting diagram shows the function of the prospective short circuit current  $I_s$  depending on the prospective current  $I_p$  (sym.r.m.s.). The coherence between the prospective current  $I_p$  (sym.r.m.s.) and the efficiency of current limitation (cut off current  $I_D$ ) by SIBA LV fuse links is given by the more flat running lines for the various fuse rated currents.

##### Time-Current Characteristics

The time-current characteristics for LV fuse links type gG are represented as "medium characteristics curves", these are within the cutoff range stipulated by VDE 0636-2. Maximum deviation in the current coordinates is  $\pm 7\%$ .

##### Fuse Discrimination

The discrimination between two fuse links of different current ratings can only be determined when considering the service voltage. The distance of discrimination in radially operated systems of 1:1.6, referred to the fuse link rated current as well as the use of fuse links of the same rated current in meshed networks is only applicable at service voltages of  $1.1 \times U_n / \sqrt{3}$ .

## Low Voltage Fuses

### European NH Knife Blade Fuse System

#### **Characteristic Stability**

Siba LV fuse Links are extremely resistant to aging. Long term overload tests according to VDE 0636 have proven that the cyclic load specified for such a test, applied for a period of 100 hours at a test current being equal to 1.15 times the fuses' rated current has been passed without ageing.

#### **Arc Voltage**

The arc voltage is considerably below the values specified by VDE 0636-2.

#### **Class aM Fuse Links**

SIBA's class aM LV fuse links are designed for the protection of switchgear in motor feeder applications. The special design of the melting element(s) provides reliable service in the limited range of the switchgear.

In the range above 4 times the fuse links rated current, SIBA LV aM class of fuse links provides protection of the thermal overcurrent relays and for short circuit current faults prevents contactor points from welding due to the extremely fast clearing time. The high breaking current rating capability of the aM fuse link required by such operation is safely achieved through low cut off currents.

#### **Class gTr Fuse Links**

SIBA's class gTr LV fuse links are designed with a specific T-C curve adapted to the load characteristics of the transformer. Therefore a better utilization of the transformers overload capacity is achieved. SIBA gTR transformer fuse links are capable of carrying 1.3 times the rated current of the transformer as a continuous load for a minimum of 10hours. At 1.5 times the transformers rated current as a continuous load the fuse operates within two hours. Characteristics per VDE 0636/2011.

#### **Class gB Fuse Links**

SIBA's class gB LV fuse links were developed to provide protection for underground installations of the mining industry, taking into consideration particularly the operating conditions for safety. Characteristics per VDE 0636/2011.

#### **Class gG Fuse Links**

SIBA's class gG LV fuse links with are designed to protect cables and wires. The operating class gG corresponds with VDE 0636 part 2and IEC 60269-2. The particular shape and design of the elements assure low power loss.
